

TRIGGER LEVERS

1021

FITS: HARLEY-DAVIDSON® MODELS ('82-'95)

PART#	INCLUDED
200455	1 8-32 x 3/8" Slotted Machine Screw – Zinc
400012	2 Bushings
400221	1 Anti-Rattle Clip
600020	1 Trigger Levers (pr)
301021	1 Instruction Sheet

TOOLS SUGGESTED

Small external snap ring pliers, 9/16" and 1/2" Open end wrenches, Grease

PROCEDURE AVERAGE TIME: 25 MINUTES

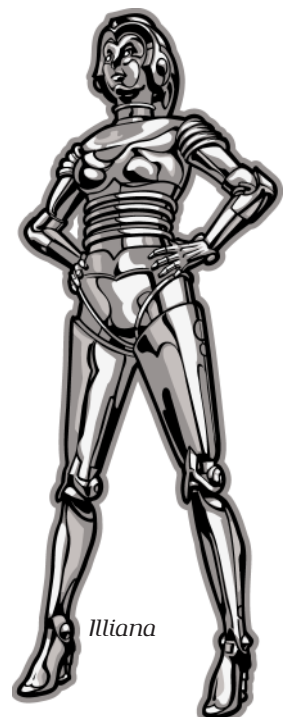

STEP 1 With your snap ring pliers, remove the snap rings located on the bottom of each lever pivot pin. Be careful not to lose the snap rings. Remove both pivot pins.

STEP 2 BRAKE SIDE

Remove the stock lever from the master cylinder, being careful not to lose the large diameter pin. Install this pin into the large hole in the new brake lever and install the new pivot bushing in the small hole. Lubricate both of these pieces with grease. Position the new lever in the master cylinder making sure all components line up. Make sure the master cylinder plunger pin indexes fully into the hole in the large pivot pin or the brake will not completely disengage. See PIC.1. Reinstall the pivot pin and snap ring.

CLUTCH SIDE

Adjust the clutch cable so the maximum amount of slack is attained. Remove the clutch lever and cable from its mounting bracket as a unit. Remove the cable and pivot from the old lever and install it in the new lever in the same fashion. Install the new pivot bushing in the remaining hole and lubricate with grease. Reinstall this assembly in the clutch lever mounting bracket. Insert the pivot pin and secure it with the snap ring. Readjust the clutch cable so there is about 1/8" of free play.
